Great Plains Communications affiliate company, AllCom Global Services, acquires Facilities Infrastructure Division of ADAR Incorporated

May 28, 2015 (Blair, Neb.) - Great Plains Communications is pleased to announce that their affiliate company, AllCom Global Services, a provider of technology infrastructure solutions to the Federal Market, has purchased the Facilities Infrastructure Division of ADAR Incorporated.

With the close of this acquisition, AllCom Global will offer its customers a comprehensive portfolio of infrastructure products and services including the full-line of software and hardware products from Liebert, Avocent, and Emerson Network Power.

"Great Plains Communications is excited for AllCom to add these new products and services to their existing suite," said Todd Foje, CEO of Great Plains Communications and Chairman of AllCom Global Services. "We are confident this acquisition will allow the company to continue to exceed their customers' expectations, and further solidify their position in the industry."

"This acquisition significantly expands our market and capabilities," said Bob Weatherwax, CEO of AllCom Global Services. "A portfolio of industry leading, smart infrastructure technologies provides our customers expertise and solutions to make their networks more efficient and resilient, and doing so via GSA schedule delivers added value."

ADAR's Facilities Infrastructure Division includes prime contracts with multiple Federal Civilian and Department of Defense customers. "Transitioning this business line into AllCom Global Services provides a great platform for growth in the Federal Government facilities space," said Debbie A. Riger, CEO and President of ADAR. "The combination of customers and past performance creates both synergies and new opportunities."

About AllCom Global Services

AllCom is headquartered in Lake St. Louis Missouri with offices located in Falls Church, Virginia and Chambersburg, Pennsylvania. For over 20 years, AllCom has been a leader in designing and building critical technology infrastructure. AllCom engineers, installs, maintains and operates mission critical information technology and telecommunications infrastructure for government and commercial customers. Their services include professional engineering across multiple domains and design and installation services for ISP, OSP, Data Centers, power systems, mechanical systems, wireless networks, security systems and specialized infrastructure-related construction.

From communications shelters to secure data centers, they provide specialized teams of engineers, technicians and project managers with a proven record of successfully delivering intricate and challenging solutions in complex environments. Their work for the Federal Government includes supporting Civilian agencies, the Department of Defense and the Intelligence community. Their cleared technical experts are experienced and adept at rapid engineering, mobilization and deployment for both domestic and global projects.
